Beamlak Sintayehu

Cybersecurity · Offensive Security · Applied AI

Addis Ababa, Ethiopia · bmx310712@gmail.com · linkedin.com/in/beamlak-sintayehu-a47b4b281 · github.com/Mr-Nobody-Anonymous · tryhackme.com/p/Mr.nobody.

Security-minded engineer working across offensive testing and applied AI. I build tooling for reconnaissance, auditing and autonomous agent execution, and I document what I find so other people can act on it. Comfortable moving from a scoped assessment through exploitation and reporting, then into the engineering work that hardens the same systems.

CORE COMPETENCIES

- Penetration testing (web, network, Active Directory)
- Malware triage, IOC extraction, YARA / Sigma rules
- Threat modelling: STRIDE, attack trees, ATT&CK mapping
- Digital forensics & incident response
- Secure code review and API security testing
- Python · TypeScript · C/C++ · Bash · SQL
- React / Node services, REST, GraphQL, tRPC
- Computer vision: OpenCV, YOLO, PyTorch pipelines
- AI agents: tool calling, memory, sandboxed execution
- Linux internals, containers, CI/CD, observability

SELECTED WORK

github.com/Mr-Nobody-Anonymous

Argus — SentinelSight

Python · OpenCV · YOLO · PyTorch

Real-time video analytics: async frame queues decouple ingestion from inference; anomaly scoring drives event telemetry and alerts.

Cerberus

Python · Networking · Threat intelligence

Multi-vector security auditing: asset discovery, service fingerprinting, CVE correlation and JSON / SARIF reporting.

ultrone

Python · Agent state machines · Sandboxing

Autonomous agent execution engine: bounded autonomy, tool calling, sandbox safety protocols.

Orion

Threat modelling · Risk assessment

Institutional architecture security framework for mapping attack paths and prioritising controls.

fkali

Bash · Kali Linux · Automation

Playbooks that stand up hardened, repeatable penetration-testing environments.

FOCUS & EXPERIENCE

2026 — present — **Autonomous AI architecture & threat modelling**

Designing the ultrone agent execution engine (state machines, sandboxed tool use) and the Orion institutional architecture security framework.

2025 — **Computer vision & real-time telemetry**

Architected Argus / SentinelSight: asynchronous frame ingestion, detection pipelines, anomaly eventing over live streams.

2024 — **Security auditing & Linux hardening**

Built the Cerberus auditing suite and Kali automation playbooks; hardening and detection work on Debian-based systems.

2023 — **Cryptography research & systems foundations**

Stream-cipher implementation and statistical bias analysis (RC4); offensive playbooks and cheat-sheet reference material.

CERTIFICATIONS & HANDS-ON PRACTICE

- **AI for Everyone: Master the Basics** (AI0101EN) — IBM · edX, 2026
- **Claude Code 101** — completion badge, Claude Academy · Anthropic, 2026
- Full, continuously updated list: linkedin.com/in/beamlak-sintayehu-a47b4b281/details/certifications/
- Hands-on labs — TryHackMe **Mr.nobody.** (web exploitation, recon, privilege escalation) · HackTheBox **2355243** (retired machines, challenge labs)

All assessment, lab and reporting work referenced here was performed with explicit authorisation.
